## Replacement of the existing method of termite control

# The processing is very simple and the cost is low.

### Pellet Type

1.Selective termite repellents were absorbed to the pellet loess or vermiculites
2.Mix or scatter on the extensive area of soil to avoid termite

### Liquid Type

1. Liquid type product of 20L, 5L, and 1L containers with the labels.
2. The product can be diluted and sprayed on the wooden buildings

# Termite-damaged areas in the United States

## (approximately $5 billion in damage)

Infestation with Subterranean Termite in US

(*from prime termit website)

Infestation with Drywood Termite in US

# Termite-X Termite repelling effect - Filed test

No treatment

Treatment Day 2

## How long does the product last?

When this product is sprayed on wood with low moisture content, the effect can be sustained for up to 3 months and may be affected by external environments such as light, moisture, and humidity.

In the case of soil treatment agent, it is in the form of pellets, but it is used more frequently when there is a change in the environment because it is affected by wind, rain, and moisture.
